

FOR IMMEDIATE RELEASE

Savant Technology Operational on Google's Android Mobile Operating System

Industry's First Intrusion Prevention Vendor to Provide Comprehensive Security Solution for Android OS

Nashua, NH—March 11, 2008— Savant Protection, Inc., today announced that its award winning Savant end-point security solution has been successfully ported to Android providing optimum security against cyber-security threats for the much anticipated mobile operating system.

Savant's passive deterrence approach presents a very small operational profile with minimal impact on system performance making it the premiere solution available to resolve the potential threat of malware intrusion on mobile/wireless systems.

"We see the introduction of Android as a potential tipping point in the positive development of the mobile industry. Unfortunately, as security professionals, we also see it as an opportunity for cyber criminals to create havoc in this promising new territory," said Ken Steinberg, President/CTO and founder of Savant Protection, Inc. "The operators need lightweight, effective security solutions that will not only protect their customers but also their infrastructure, both terrestrial and wireless. It is our intention that Savant be the preeminent weapon in the fight to keep our mobile lifestyle unencumbered and safe."

Savant technology makes computing systems impervious to the injection and spread of malicious applications, scripts or changes to the system's existing soft infrastructure by providing unique cryptographic signatures to the approved application set on each system. The ability of unauthorized or unknown applications to execute is denied rendering it impossible for malicious code to compromise the host system or spread to other Savant enhanced systems. By containing viral intrusion and eliminating its spread, the risk of network-wide compromise is averted. Savant eliminates the need for bandwidth clogging inoculation downloads; scanning or persistent patching thus freeing up critical system resources resulting in uninterrupted usage and system performance.

About Savant Protection, Inc.:

Recently selected by *Network World* as one of the *Top Ten* security companies to watch, Savant Protection provides the Final Line of Defense in Cybersecurity. Only Savant eliminates known and unknown attacks, minimizes revenue impacting events and provides persistent cybercrime deterrence. Savant's patented end-point spread

elimination technology dramatically enhances corporate survivability from malicious intrusion and targeted cyber-attacks. Founded in 2004 and headquartered in Nashua, New Hampshire, Savant Protection is a privately held company. For more information, visit the web site at <http://www.savantprotection.com/android.htm>.
