

**FOR IMMEDIATE RELEASE**

## **Point of Sale System Lockdown Provides Enhanced Security**

### *Burlington Coat Factory Deploys Savant Technology on Point of Sale Systems*

Nashua, NH—January 15, 2008—Savant Protection, Inc., the only intrusion prevention vendor to guarantee business continuity for enterprise computing, today announced the deployment of Savant technology by Burlington Coat Factory on its chain-wide network of Point of Sale systems in an effort to further “lockdown” use and procedure, mitigating unauthorized access and misuse.

“The addition of Savant technology helps to lock down computing devices in our retail stores”, said Brad Friedman, Chief Information Officer at Burlington Coat Factory. “Like many other businesses, risk and security management have become a critical part of our everyday life. We are hopeful that our use of the Savant technology will provide even greater security safeguards.”

Burlington Coat Factory’s Information Technology Team has deployed Savant after completing rigorous testing and is using the technology to harden systems to authorized best practices, policies and procedures in all transactional and customer related processes.

“Burlington Coat Factory’s adoption of our technology will hopefully provide significantly greater exposure of our robust technology to the marketplace,” said Ken Steinberg, President/CTO and Founder of Savant Protection, Inc. “This is an exciting time as Burlington Coat Factory is instituting one of the most effective and innovative solutions to combat system compromise, unauthorized use and mitigate the devastating effects of malware intrusion.”

Savant technology makes computing systems impervious to the injection and spread of malicious applications, scripts or changes to a system’s existing soft infrastructure by providing unique cryptographic signatures to the approved application set on each host system. The ability of unauthorized or unknown applications to execute is denied, rendering it impossible for malicious code to spread to multiple systems. By containing viral intrusion and eliminating its spread, the risk of system-wide compromise is averted. This approach removes the need for inoculations, rules, heuristics, white lists, scanning or persistent patching. Savant frees up critical system resources resulting in dramatically improved system performance over traditional solutions.

### **About Savant Protection**

Recently selected by *Network World* as one of the *Top Ten* security companies to watch, Savant Protection provides the only intrusion prevention technology to

guarantee business continuity, minimize revenue impacting events, and deter cybercrime. Savant's patented end-point spread elimination technology dramatically enhances corporate survivability from malicious intrusion and targeted cyber-attacks. Founded in 2004 and headquartered in Nashua, New Hampshire, Savant Protection is a privately held company. For more information, visit the web site at <http://www.savantprotection.com>.
