

FOR IMMEDIATE RELEASE

**Savant Version 2.0 Now Available: Your Final Line of Defense in
Cybersecurity - Guaranteed**

*Award Winning Software Provides Complementary Enhancement in Enterprise
Multi-layered Security Strategies*

Nashua, NH—March 25, 2008— Savant Protection, Inc., today announced that it has released Version 2.0 of its award winning Savant end-point security solution. The much anticipated release, provides corporate security officers with a powerful tool specifically designed to address the rapid propagation of new and targeted crimeware exploits.

With 2.0, Savant provides the only complementary solution designed to fortify existing security solutions against the propagation of threats from internal misuse, external attack and unauthorized change. Savant's passive deterrence approach presents a very small operational profile that allows its successful operation while not disrupting how traditional Anti-virus and security solutions function. Savant's comprehensive central management provides the scalability necessary to meet the requirements of any Windows or Linux enterprise, allowing for immediate and complete control over all Savant clients, regardless of time or location.

"One of the most exciting aspects to Information Security is the innovation driven by need. We continue to push the envelope in Windows, Linux, and mobile environments," said Ken Steinberg, President/CTO and founder of Savant Protection, Inc. "We are especially excited about announcing Intrusion Prevention for production systems and our enhancements to Compliance reporting through our Application Intelligence enterprise management interface."

Savant Protection, Inc. invites the immediate download of a fully functional 30 day trial version of Savant 2.0 in order for corporations to experience the full impact of this innovation in enterprise security. Please visit www.savantprotection.com/get-savant.htm to take advantage of this offer.

Savant technology makes computing systems impervious to the injection and spread of malicious applications, scripts or changes to the system's existing soft infrastructure by providing unique cryptographic signatures to the approved application set on each system. The ability of unauthorized or unknown applications to execute is denied rendering it impossible for malicious code to compromise the host system or spread to other Savant enhanced systems. By containing viral intrusion and eliminating its spread, the risk of enterprise-wide compromise is averted. Savant does not use any form of inoculation downloads, system scanning, heuristics, centralized lists or persistent patching thus not impacting traditional efforts.

About Savant Protection, Inc.:

Recently selected by *Network World* as one of the *Top Ten* security companies to watch, Savant Protection provides the Final Line of Defense in Cybersecurity. Only Savant eliminates known and unknown attacks, fortifies existing security efforts to stop enterprise compromise and minimizes revenue impacting events from malicious breach or unauthorized change. Savant's patented end-point spread elimination technology dramatically enhances corporate survivability from malicious intrusion and targeted cyber-attacks. Founded in 2004 and headquartered in Nashua, New Hampshire, Savant Protection is a privately held company. For more information, visit the web site at <http://www.savantprotection.com>.
