

## **AUTOMATED APPLICATION WHITELISTING**

### **Protect Desktops through Automated Application Whitelisting**

The battle to protect IT assets from malware and unauthorized software is costly and ongoing as threats by cyber criminals increase in sophistication and frequency. IT now demands more practical ways to safeguard their systems and control the software running on them to ensure security without disrupting operations.

Savant Protection is a business-driven whitelisting solution for protecting desktops, servers, process control systems, and point-of-sale (POS) systems. Its Automated Application Whitelisting stops malware before it hits. Using Savant Protection's patented implicit whitelisting technology, enterprises easily secure their IT assets by blocking known and yet-to-be discovered malware.

Safeguarding Your Business Today and Tomorrow***

### **Business -Driven Application Whitelisting**

Savant Protection is the first Application Whitelisting solution purpose-built to protect desktops without disrupting business by preserving the end-user experience across each desktop in the organization.

Savant Protection automatically allows authorized software to execute but prevents unauthorized software and malware, including viruses and Trojans, from running. Its next generation decentralized approach coupled with its easy to administer unified management system eliminates the administrative overhead and subsequent cost imposed by traditional and complex centralized whitelisting database solutions.

Unlike other complex solutions, which can disturb operations when a whitelist does not match the business reality of endpoints, Savant Protection provides the utmost security while ensuring business continuity by automatically whitelisting and protecting each desktop.

---

*"Savant was the only solution that fit our way of doing business. It allows everyone to have different desktops and still protect them with the same level of confidence."*

**Joel Rosenblatt,  
Manager Computer and  
Network Security,  
Columbia University**

---

*"Savant Protection offers a different slant on application whitelisting. The solution's focus is on ease of use and operational efficiency without business disruption - all with minimal requirements for administration."*

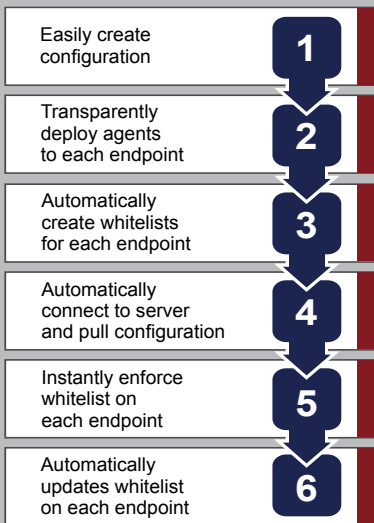

**Network World Magazine  
March 2010**

---

*“Innovative products such as Savant Protection’s Automated Application Whitelisting are bringing significant and quantifiable improvements in security and compliance to a wide array of industries. Savant clearly understands its customers’ needs; providing total control and security over endpoints without disrupting business.”*

**Network Products Guide  
March 2010**

**Automated  
Application Whitelisting**

**Supported Platforms**

- Windows 7
- Vista
- Server 2008
- Windows 2000
- Windows XP
- Windows XP Embedded
- Windows POSReady 2009
- Windows Server 2000

**Savant Protection Makes it Easy...**

**Simple and Secure**

- Whitelist on each device - all executables
- Implicit whitelist across the organization
- Unique keys prevent the proliferation of malware

**Easy to Deploy**

- Automatically creates whitelist for each device
- Automatically connects to server and pulls configuration
- Instantly enforces whitelist
- Automatically maintains the whitelist

**Works with Existing Infrastructure**

- Seamlessly fits into existing software management workflow
- Extensible support for all common software updaters, such as Adobe, Symantec, Mozilla
- Compatible with anti-virus solutions

**Savant Protection Benefits**

- Prevents malware and unauthorized executables
- Allows authorized software updates automatically
- Minimizes burden on IT departments
- Improves regulatory compliance with expanded visibility
- Transparent to the end-user

**About Savant Protection**

Savant Protection is the leader in automated application whitelisting. The company’s award winning and patented solution provides total control over all executables on end user devices, eliminating the risks caused by malicious and unauthorized software. Savant Protection’s next generation application whitelisting is the only solution that uses an “implicit” whitelist which stops even the most sophisticated malware attacks without the management overhead or productivity disruption to end users required by today’s centralized whitelist signature approaches. Savant Protection’s easy-to-deploy and seamless-to-use solution provides the highest levels of endpoint security.
