SAVANT PROTECTION ANNOUNCES CONTRACT AWARD FROM US NAVY
Savant Protection's technology to be added to Navy Flight School's Altiris System

December 9, 2009 – Hudson, NH – Savant Protection announced today that it has been awarded a contract to supply its easy to deploy application whitelisting product to the US Navy's Flight School at Corpus Christi, Texas for use with the Altiris Client Management Suite from Symantec. The Navy will take advantage of the ability to add application whitelisting capability and leverage the investment they have in their Altiris system.

Earlier this year Savant made its Version 3 product available as an add-on for Altiris customers and also announced partnerships with Altiris Platinum Resellers. "This recent award is an example of Savant's strategy to make our easy to deploy whitelisting and anti-malware solution a straightforward addition to existing endpoint management systems," said Brian Connolly, VP of Sales and Business Development.

Savant Protection's system provides a layer of protection not available with legacy security systems such as end point suites, antivirus and firewalls. Savant provides security and flexibility without breaking the end user environment. Savant's security protects authorized software from being altered by an attacker and prevents unauthorized software or malware from running. Savant's flexibility allows trusted software programs to update automatically while computer users can operate without the fear of infection from drive by downloads or malicious email attachments. Savant Protection installs as a layer of protection without disrupting existing systems including legacy security systems. For more information, contact Savant Protection at info@savantprotection.com.

About Savant Protection

IT professionals turn to Savant Protection to regain control of company systems and substantially improve end point security by preventing unauthorized applications from running. Its flagship product, the Savant Client with Enterprise Management System, is the only software based solution that provides the flexibility for IT to control and protect applications, stops the execution of unauthorized software, and eliminates the intrusion and spread of malware - without the management overhead, or disruption to end users required by today's centralized whitelist signature approaches. Savant Protection was formed in 2006, is privately held, and is headquartered in Hudson, New Hampshire. www.savantprotection.com
