

REGAIN CONTROL OF YOUR ENTERPRISE

FOR IMMEDIATE RELEASE

### **SAVANT PROTECTION IMPROVES SECURITY FOR LOCAL GOVERNMENTS**

*San Miguel County Colorado and Lincoln County Nebraska secure local services for their constituents*

HUDSON, NH – February 26, 2009 – Savant Protection, a provider of easy to use application whitelisting solutions has been selected by San Miguel County Colorado and Lincoln County Montana to provide desktop and end-point computer system security. By adding Savant Protection to their systems, the Counties are able to [lockdown critical services](#) and systems, disable unwanted or unauthorized software and prevent viruses, Trojans, bots and other malware from infecting systems.

“San Miguel County has a small IT staff and many remote users, yet must ensure security across all departments from administrative services to very critical safety and emergency services” said Jim Soukup, San Miguel County’s IT Director, “Savant’s Enterprise Management System was easy to install and gain the benefits of whitelisting immediately. We knew within a day what was running and where, making it easy to whitelist all critical applications while rendering unneeded and unauthorized software useless.”

“Lincoln County covers a very large geographic area, and we don’t have the ability to bring all systems in-house” said Ric Kesling, Lincoln County Montana, “Savant was simple to deploy and protects our remote users, even when they are disconnected from our network. This saves us time rebuilding user machines that in the past were cluttered with personal software.”

[Savant Protection](#) provides a cost effective application whitelisting security solution that does not require the investment typical of other enterprise class security solutions. Local government organizations under budget pressure and with limited IT staffs can quickly and easily deploy a Savant Protection system and gain immediate visibility and control of all deployed applications, disabling unwanted software. With Savant, trusted applications can update silently, even for remote or disconnected users, while unauthorized software is rendered inoperable.

Unlike other solutions, Savant installs in minutes and begins protecting systems immediately. Savant Protection provides organizations with the flexibility to grant users the right to install new software or lockdown systems completely, regardless of the user’s Windows privileges.

#### **About Savant Protection**

Security professionals turn to Savant Protection to regain control of company systems by preventing unauthorized applications from running. It’s flagship products, the Savant Enterprise Management System is the only solution that provides system lock down, stops the execution of unauthorized software, and eliminates the intrusion and spread of malware - without the management, processing and memory overhead required by today’s centralized whitelist signature approaches. Selected by Network World as one of the Top Ten security companies to watch, Savant has received the prestigious 5 Star Recommended Award from SC Magazine and was voted a finalist in the eWeek 2007 Excellence Awards. Founded in 2004 and headquartered in Hudson, New Hampshire, Savant Protection is a privately held company.
